Strategy Development and Deployment

The Institutional Strategic Plan for Addressing Water Shortage

17.05.2024

As part of the institution's strategic plan to ensure sustainable resources, the college identified the seasonal water shortage, particularly during the summer months, as a significant challenge. This shortage affected the availability of drinking water and other essential needs on campus, especially near the sports field. To tackle this issue, the college devised a strategic plan to dig a borewell within the campus.

The plan was presented to the college's students and alumni, seeking financial support to implement the project. Recognizing the critical need for action, the alumni responded with wholehearted enthusiasm, providing the necessary monetary assistance. With the support of the alumni and the necessary approvals from the university, the college swiftly moved forward with the borewell installation.

The college took a systematic approach to ensure the project's success, consulting experts and processing all required documentation to ensure compliance with regulations. The borewell was successfully dug, ensuring a sustainable water supply for the campus during the summer months and alleviating the water scarcity issue.

This initiative demonstrates the effective deployment of the college's strategic plan, showcasing its commitment to overcoming infrastructure challenges and fostering collaboration with its alumni for the greater benefit of the campus community.
